 3  // UNSW Freefall assignment.
 4  // Update 24/June: Everything is finished except for most of the stage 4.
 5
 6  #include <stdio.h>
 7  #include <stdlib.h>
 8  #include <math.h>
 9
10  // The size of the array.
11  #define SIZE 15
12  // The meaning of each command number.
13  #define EMPTY 0
14  #define STONE 1
15  #define MARCHING_BLOCK 2
16  // Define the number of stone will be destroyed by the laser.
17  #define LASERPOWER 3
18  // For marching blocks, define 4 is left, 6 is right, 2 is down.
19  // MOVED is used to prevent repeated movements
20  #define MOVED 1
21  #define DOWN 2
22  #define LEFT 4
23  #define RIGHT 6
24  // Define the valid input range for placing stone in stage 1.1.
25  #define EXPRESSION_FOR_VALID_ROW ((row[counterForSets] >= 0)\
26  && (row[counterForSets] < 15))
                                ^
                                + ========================================================== +
                                + CONSTANTS: you should use the provided #defines e.g. SIZE +
                                + ========================================================== +
27  #define EXPRESSION_FOR_VALID_COLUMN ((column[counterForSets] >= 0)\
28  && (column[counterForSets] < 15))
29  #define EXPRESSION_FOR_VALID_LENGTH ((length[counterForSets] >= 0)\
30  && (length[counterForSets] <= 15))
                                          ^
+ ========================================================== +
+ Be very very careful when you do this, it is not good C     +
+ style and is not recommended. While doing this may          +
+ make your code more readable, it also hides functional code +
+ - making it difficult to debug. It also hides a "magic      +
+ number" 15, if someone was to change the #define SIZE to 20 +
+ instead, this expression will still check 15 rather than    +
+ 20. While it may seem superfluous, you could instead create +
+ a function for these defines. E.g. int valid_row().         +
+ ========================================================== +

Test 01_place_multiple_invalid (./freefall) - failed (errors)
Your program produced these errors:

freefall.c:164:17: runtime error - index 15 out of bounds for type 'int [15]'

dcc explanation: You are using an illegal array index: 15
Valid indices for an array of size 15 are 0..14
Make sure the size of your array is correct.
Make sure your array indices are correct.

Your program produced no output

Test 04_gravity_left (./freefall) - failed (errors)
Your program produced these errors:

Runtime error: uninitialized variable accessed.

Execution stopped in playerMovement(command=1, directionForPlayer=<uninitialized value>, playerX=7) in freefall.c
at line 206:
```

```
int playerMovement(int command, int directionForPlayer, int playerX) {
// command == 1: Valid command to initiate the movement.
// playerX < (SIZE - 1): Make sure the player will stay within the range.
if (command == 1 && playerX < (SIZE - 1)) {
-->     if (directionForPlayer == -1) { // Left
playerX--;
} else if (directionForPlayer == 1) { // Right
playerX++;

Values when execution stopped:

command = 1
directionForPlayer = <uninitialized value>
playerX = 7

| Blocks Above the Map                   |  0/6         | 0.0/5        |
| Gravity Storms                         |  0/9         | 0.0/5        |

(* indicates test passed some, but not all tests)

NOTE: The following mark may be slightly different to the sum of
the "Mark Allocation" column above. This is due to rounding, not
a mistake. We will not change marks because of rounding.

Sum of percentage points gained: 87.3/100

This mark gets scaled to be out of 80:

Mark for automarking tests: 69.9/80

You can rerun the tests used in marking by running: 1511 automark freefall

!!specialmark  (automated testing)                    69.9/80

!!marktab       **  MARKER'S  ASSESSMENT  **

                              style  (20)     17???

!!finalmark     **  FINAL  ASSIGNMENT  MARK:    86.9/100

+ ======================================================== +
+ Good job Zheng on your first assignment! I liked how you  +
+ broke down your code into functions. Work on removing     +
+ "magic numbers" that are unclear in your code - hence     +
+ removing unessecary comments that explain those numbers,  +
+ and writing comments above your functions.                +
```
